

Hello, World

To get acquainted with the submission and auto grading process, write a program that prints the words:

```
Hello, world!
```

Print a newline at the end of the output.

Files We Provide You: A `makefile` is provided to build your code. The executable file created by a successful build will be named `hello`.

File You Must Submit: Place your program code in a source file named `hello.cpp`.

Example

Output: `Hello, world!`

Explanation: When successfully executed, the program simply prints the required output and terminates normally.
